

# Management of Contaminated lands in Lithuania

Kestutis Kadunas  
Geological Survey of Lithuania

# Groundwater use and protection strategy 2002 - 2010

- To prepare and keep register of pollution sources of the geological environment;
- To survey pollution sources, to monitor, to prepare programmes of measures and sanitation of CL at risk
- To develop methodical recommendations for investigation and monitoring
- To set pollution thresholds in the soil and GW

# Single Programming Document of Lithuania 2004 - 2006

## Improvement of environmental quality and prevention of environmental damage

- Identification and cleanup of past pollution
  - Cleanup of polluted sites (over 800) is practically not undertaken
  - Majority of indicated areas are military sites, landfills and potentially polluted by POP's sites
  - Cleanup of the past pollution if its cause danger to environment and public health
  - management and cleaning of.....GW reservoirs

# Single Programming Document of Lithuania 2004 - 2006

## Improvement of environmental quality and prevention of environmental damage

- To strengthening and improve environmental management systems, .....and institutions responsible for environment quality management and damage prevention.

# Waste sites management

- 750 waste sites (landfills) identified to 2003
- 42 closed and recultivated
- 108 detail investigations necessary to validate stringency of environment protection measures (Chemical wastes were disposed)
- Recultivation of other waste sites
- In 2009 - 11 regional (new design) landfills

# Monitoring - information for design the program

- Close relation between national and local monitoring
- National - diffuse pollution (or background information)
- Local:
  - potential water polluters
  - water resources users
